Fix the resume tailoring and PDF generation to output resumes that look like the user's actual original resume format, not AI-generated bullet dumps.

The Problem

Current tailored resume output is a wall of unstructured bullets with no company/role hierarchy, no dates, and SOURCE/BRIDGED annotations cluttering the PDF. It looks AI-generated, not professional.

The User's Original Resume Format

```
# OKTAVIA PRETTY AMALIA
**Senior Product Manager**

📧 prettyamalia12@gmail.com | 🌐 prettyamalia.com | 💼 linkedin.com/in/prettyamalia | 📍 Indonesia
↪  (Open to Remote & Relocation)

---

## PROFESSIONAL SUMMARY
[2-3 sentences, tailored to job]

---

## CORE SKILLS
[Inline, comma-separated, tailored to job — 8-12 skills max]

---

## PROFESSIONAL EXPERIENCE

### Bitazza | Bangkok, Thailand (Remote)
**Senior Product Manager** | Feb 2024 – Jun 2026

- [Tailored bullet 1 — strongest, most relevant to job]
- [Tailored bullet 2 — second strongest]
- [Tailored bullet 3 — third strongest]
- [Tailored bullet 4 — if space allows]

### Itsavirus | Bali, Indonesia (Hybrid)
**Product Owner** | Jun 2022 – Sep 2023

- [Tailored bullet 1]
- [Tailored bullet 2]
- [Tailored bullet 3]

**Android Engineer** | Jun 2020 – Jun 2022

- [Tailored bullet 1]
- [Tailored bullet 2]

### Assist.id | Pekanbaru, Indonesia (On-site)
```

```
**Android Developer** | Aug 2019 – May 2020

- [Tailored bullet 1]
- [Tailored bullet 2]

### Mapid.io | Bandung, Indonesia (On-site)
**Android Engineer** | Feb 2019 – Aug 2019

- [Tailored bullet 1]
- [Tailored bullet 2]

Jira • Confluence • Notion • SQL • Figma • Segment • Claude Code • Cursor • GitHub
```

Required Changes

1. Update `src/job_compass/tailor.py`

The `tailor_resume()` function must return structured data that preserves the original resume hierarchy, not just a flat list of bullets.

New output structure:

```python
class TailoredExperience(BaseModel):
    company: str
    location: str
    role: str
    dates: str
    bullets: List[str]  # 3-4 max, tailored, no SOURCE/BRIDGED annotations
```

```
    is_relevant: bool   # if False, drop from final resume or minimize

class TailoredResume(BaseModel):
    name: str
    title: str
    contact: str
    summary: str
    skills: List[str]  # 8-12 max, tailored
    experience: List[TailoredExperience]
    education: str
    volunteer: Optional[str]
    languages: List[str]
    tools: List[str]
    cover_letter: str
    changes_made: List[str]
    warnings: List[str]
    estimated_ats_score: int
    created_at: str
```

Tailoring logic:

1. Parse the user's base resume into the structured format above (company, role, dates, bullets)
2. For each job requirement, identify which EXPERIENCE SECTION (company + role) best matches
3. Select 3-4 strongest bullets per role that align with job requirements
4. Rewrite bullets to use job keywords naturally, but preserve all facts
5. Drop or minimize roles that are irrelevant to the target job (e.g., Android Engineer roles for a pure PM job — keep 1-2 bullets max if at all)
6. NEVER invent new companies, roles, dates, or metrics
7. SOURCE and BRIDGED annotations are for INTERNAL tracking only — strip from final output

2. Update `src/job_compass/pdf_generator.py`

The PDF must render the structured resume format, not a flat bullet list.

PDF layout spec:

- **Header**: Name (18pt bold), Title (12pt italic), Contact line (9pt) — centered or left-aligned
- **Summary**: 10pt, 1.15 line spacing, no bullet points
- **Skills**: 9pt, inline comma-separated, wrapped
- **Experience** — PER COMPANY BLOCK:
- Company | Location (10pt bold)
- Role | Dates (10pt italic, right-aligned dates)
- Bullets: 9pt, • prefix, 1.15 line spacing, left margin 0.2in
- 3-4 bullets max per role
- Space between company blocks: 0.15in

- **Education**: School (10pt bold), Degree + Dates (9pt)
- **Volunteer**: Optional, only if relevant
- **Languages**: Inline, 9pt
- **Tools**: Inline, 9pt, comma-separated
- **Max 2 pages**, white background, black text, Helvetica/Arial
- **No SOURCE, no BRIDGED, no AI artifacts**

3. Update `src/job_compass/models.py`

Replace `TailoredResume` with the new structured model above. Keep backward compatibility or update all references.

4. Update `static/index.html`

The preview UI should show the structured resume, not a flat bullet dump.

- Collapsible sections per company
- "Expand/Collapse" for each role
- Highlight which bullets were changed (green = reworded, yellow = added emphasis)
- "Download PDF" generates the clean, professional resume

5. Update `tests/test_tailor.py`

Add tests:

- `test_resume_structure_preserved`: output has company/role hierarchy matching input
- `test_no_flat_bullet_dump`: experience is not a single list of 20+ bullets
- `test_max_4_bullets_per_role`: no role has more than 4 bullets
- `test_no_source_annotations_in_final`: final output has no [SOURCE: or [BRIDGED:
- `test_dates_preserved`: all original dates appear in output
- `test_companies_preserved`: all original companies appear in output

6. User Profile Context

User: Oktavia Pretty Amalia Current title: Senior Product Manager Experience hierarchy (most recent first):

1. Bitazza | Bangkok, Thailand (Remote) — Senior Product Manager — Feb 2024 – Jun 2026
2. Itsavirus | Bali, Indonesia (Hybrid) — Product Owner — Jun 2022 – Sep 2023
3. Itsavirus | Bali, Indonesia (Hybrid) — Android Engineer — Jun 2020 – Jun 2022
4. Assist.id | Pekanbaru, Indonesia (On-site) — Android Developer — Aug 2019 – May 2020
5. Mapid.io | Bandung, Indonesia (On-site) — Android Engineer — Feb 2019 – Aug 2019

Education: Politeknik Caltex Riau — BASc Informatics Engineering — 2014 – 2018 Volunteer: Stella's Child — IT Education Mentor — Oct – Dec 2022

Generated by Kimi.ai

Stop Rule

If the output still looks like an AI-generated bullet dump (no company/role hierarchy, no dates, flat structure), STOP and report failure. The resume MUST look human-written and professional.
